

Uninstall hide system software (ex. Windows Messenger)

Last Updated mercoledi, 28 novembre 2007

There are some software in WindowsXP that are hide and cannot apparently be removed (for example Windows Messenger).

To find all the programs you can open the file C:\WINDOWS\inf\sysoc.inf with notepad or another text editor, find and remove the 'hide' statement.

You can now remove whatever software you want from 'Add or Remove programs' in Control Panel.
