Another function really useful  
PHP, missing in Javascript is foreach.

Here below a good example showing an associative array handling:

```
var array1 = new Array();
```

```
array1['value1']=10;
```

```
array1['value2']=20;
```

```
array1['value3']=30;
```

```
for (var vv in array1) {
```

```
document.write(vv + ' - ' + array1[vv] + '<br>');
```

```
}
```
