If you are looking for an Explode function in Javascript the Split method of string class could be really helpful.

In the example below the three elements of a date are stored in the array a; with the alert we are showing then the year.

```
<script language="Javascript">
```

```
var Dt = "01/08/2005";
```

```
a = Dt.split('/');
```

```
alert (a[2]);
```

```
</script>
```
