The code here below shows how to shuffle a php array: the script creates a 20 element array and prints out its content after having modified the element order.

```
$nrs = range(1, 20);  
srand((float)microtime() * 1000000);  
shuffle($nrs);  
while (list(, $nr) = each($nrs)) {  
    echo "$nr ";  
}
```
